

EDGE™

EARTHGUARD® PELLETS

No Water? Cold Weather? Site Access? No Problem.

Pellet form of top-rated EarthGuard® Fiber Matrix

Now you've got the edge. Especially when time, weather, distance and water availability conspire against you. Also, great for manual application on smaller sites when a hydraulic application isn't cost effective.

Erosion control for sites with limited access and/or low water availability:

- Apply Manually – for precise application control, or for small or remote coverage areas – apply by hand.
- Apply Mechanically – for larger coverage in remote areas with no access to water – apply using broadcast spreader.
- Apply Aerially – fast and cost effective for limited water access areas, including remote sites of any size.
- Formulated to completely expand within 1 minute in the presence of rain.
- Same great EarthGuard® technology without the water delivery costs.
- Can be applied in any weather.

Edge™ is applied in its dry, pellet form. When the site receives its first rainfall, the pellets expand, spreading both the fiber and the EarthGuard® soil stabilizer.

EDGE™

EARTHGUARD® PELLETS

Smart applications for remote sites of any size – without hydromulching.

Effective For:

- Slope Stabilization
- Landscape Design
- Reclamation
- Storm Water Runoff Protection
- Environmental Disaster Response
- Hazardous Waste Cover
- Land Development
- Construction
- Utilities
- Pipelines

Can be spray applied with applicator if preferred.

Make your budget go at least 5x further. Contact us to find out how.

EDGE0117

Highly effective & cost efficient erosion control for sites with limited access and/or low water availability.

Application Rates:

	≤ 4 to 1 Slope		3 to 1 Slope		≥ 2 to 1 Slope
